TATRA
DEFENCE
VEHICLE

The Tatra Force 8x8 with a special superstructure is a highly mobile vehicle suitable for use as a mobile command post, a communication vehicle or a staff workplace, for an electronic warfare tasks (další navazující text zachovat - and an electronic protection atd.) and an electronic protection with additional electronic monitoring of the electromagnetic spectrum even in motion with the possibility of fully automatic construction of antenna systems and without the need to prepare the power supply system. An integral part of the development by the TATRA DEFENCE VEHICLE a.s. is the incorporation of automatically controlled stabilisation supports to ensure the horizontal (levelled) position of the complete vehicle for the correct operation of the integrated antenna masts.

The Tatra Force vehicle with high offroad ability can be equipped with an armoured cabin with ballistic protection up to level 4 and anti-mine protection up to level 3 according to the STANAG 4569 standard in a two- or four-door version. The superstructure is manufactured in ballistic protection up to level 2 according to STANAG 4569 and mine protection up to level 2 according to STANAG 4569.

Body equipment:

- independent source of electric power–electric generator;
- filter-ventilation;
- air conditioning unit;
- system of mechanical protection and support elements of accessories (especially antennas), which are located on the roof;
- automatic levelling system for vehicle leveling in the terrain;
- laminate protection of components on the roof of the vehicle;
- handling devices for mounting and dismounting the antennas;
- brackets for mounting the antennas;
- armoured door and hatch.
